SUBJECT: REPORT ON SURVEY OF MOSQUITO BREEDING PLACES IN MAMC CAMPUS

Ma'am,

A follow up survey of mosquito breeding and potential breeding sites was conducted by the Dengue Surveillance team of the Department of Community Medicine on 07/12/2022, which included all areas covered in prior surveys.

Key potential breeding sites observed in the survey were,

- Water collection near water coolers in hostels, and near Gazebo fountain and Anatomy Park.
- General and horticulture waste at various areas of the campus, including hostels and residential quarters
- Condemnation material on terrace of hostels and Guest house
- Open Dustbins in hostels, other areas of the campus and near library.

Pictures of the survey are attached herewith, and shared on the WhatsApp group of the institute. This is also for your kind information that this was the last survey to be conducted for the year 2022. The next survey will be conducted in June, 2023.

Submitted for necessary action.

Thanking You,

DR. NIDHI BHATNAGAR
Associate Professor
